

Fortune 100 Energy Company Stops Robocall Attacks and Fortifies Critical Infrastructure Telephony Security

Robocalls &
Spam

Harassing /
Restricted Calls

Challenge

A Fortune 100 energy company needed to stop robocall attacks and strengthen the security of its voice network. This energy company provides critical infrastructure as one of the largest operators of nuclear power plants in the United States. It also is one of the largest electric parent companies by revenue, employing over 30,000 people.

The power company asked for a voice firewall and intrusion prevention system (IPS) along with a managed service. The SecureLogix Call Defense™ System provides voice IPS, a voice firewall, and the Red List™ caller profile database. It can track and block suspicious phone numbers / calls while providing detailed call analytics and reporting.

Approach

SecureLogix solutions provided the energy company voice visibility and security, as the tools quickly identified and blocked incoming robocalls. The SecureLogix Call Secure™ Managed Service provides an added layer of voice security all while managing the voice security platform for the client.

Result

SecureLogix ensures critical voice / call infrastructure is secure from current and emerging voice threats for this leading U.S. utility.

Solutions

CALL DEFENSE™
system

CALL SECURE™
